

Sec I science

Natural Resources - Where do things come from?

1. Choose an object – can be anything like cell phone, hockey stick, running shoes etc.
2. Name a minimum of 3 material components of the object: ex a hockey stick can be made with wood, aluminum, Kevlar.
3. Describe where each of these materials is found or made up of: ex wood comes from lumber which comes from trees, Aluminum is a metal found in the earth's crust. Kevlar is produced from a plastic which is carbon based from fossil fuel.
4. For each of the 3 materials provide a description of it: History, processing, where found naturally geographically and any other relevant information. This can be done as a research paper, video, power point, poster, drama presentation etc.
5. Provide a list of sources of information (minimum of 3 different sources)
