

## Sec II Test Changes in Matter & Density, Ch. 2

### Key Concepts

Matter is neither created nor destroyed. Transformations change the properties of matter, but do not create or destroy matter. The total mass is constant. (p. 43)

List indicators of chemical change. (p.36)

What is chemical change? What is physical change? What's the difference? (p. 27 & 34)

Density (in class) – High density = “more mass compressed into a smaller volume”. Low density = “less mass in a larger volume.”
